...d facility ... Registry Service (FRS) for the subset of facilities that link to the Toxic Substances Control Act (TSCA) Chemical Substance Inventory System. Section 8 (b) of the Toxic Substances Control Act (TSCA) requires EPA to compile, keep current and publish a list of each chemical substance that is manufactured or processed, including imports, in the United States for uses under TSCA. Also called the "TSCA Inventory" or simply "the Inventory," it plays a central role in the regulation of most industrial chemicals in the United States.

The Facility Registry Service (FRS) provides quality facility data to support EPA's mission of protecting human health and the environment by identifying and geospatially locating facilities, sites, or places subject to environmental regulations of environmental interest. Facility data is improved with geospatial processing of incoming data and data curation tools to provide an integrated, dataset to partners and the public through a

variety of methods and products. For more detailed information about these facilities, use the FRS Query tool.

Geographic Coverage

The dataset covers a wide geographic extent including all U.S. states, territories and tribal areas.

Data Attributes and Usage

- Facility identification, names, and physical addresses
- Regulatory program details and environmental interest types
- Geospatial location accuracy with coordinates standardized to NAD83
- Status indicators such as active status and federal ownership
- Web links to EPA resources for further facility and program information

Applications

This feature service supports environmental management, regulatory compliance tracking, chemical safety oversight, and public access to regulated facility information. It can be integrated into GIS products to facilitate spatial analysis of chemical substance inventories and regulatory activities under TSCA.

Licensing and Access

The data is public domain from the U.S. EPA with no copyright restrictions but is provided without warranty regarding accuracy or fitness for use. Users should consult the associated metadata for limitations and intended data use.
